Sierra: a power-proportional, distributed storage system

Azure [1] Because storage is not power proportional, it limits the power proportionality of the whole data center Some power-proportionality is achievable at the hard-ware level, eg, using dynamic voltage scaling (DVS) for CPUs However non-CPU components, especially disks, are not power-proportional

Power Laws in Economics and Finance

A power law (PL) is the form taken by a remarkable number of regularities, or laws, in economics and finance. It is a relation of the type $Y \propto kX^a$, where Y and X are variables of interest, a is the PL exponent, and k is typically an unremarkable constant.¹ For example,
